

Panay Island

Address: Panay Island

Description: Hosting the few remaining intact forests in Panay island, this area is the best hope for the survival of the highly endangered endemic inhabitants of Western Visayas. The threats here come in the form of habitat destruction due to over-exploitation of lumber resources. Hunting and poaching of wildlife, as well as mining activities also pose notable conservation challenges.

Status: Closed

Site Profile Summary

Ecosystem Types	Lowland Forest
Protection Status	Natural Park (Presidential Proclamation No. 186)
Area	12,009 hectares
